WW REACTIVE WOOD STAINS

WW sells reactive wood stain products to create the weathered wood look. Products react with the tannins in the wood to create authentic weathered wood. Color results are wood species contingent. WW contains NO VOCs, is non-toxic and has no harmful fumes.

WW is:

- ▲ Interior & Exterior
- ▲ Water-Based
- ▲ Topcoat Compatible
- ▲ Earth-Friendly
- ▲ Non-Toxic
- ▲ VOC Free

USE:

INTERIOR: For furniture, flooring, cabinetry, millwork, doors, wainscoting, etc.

EXTERIOR: Use on shingles, siding, fence, decks, etc. WW oxidizes the wood and provides an all-natural UV protection. Must be used with an exterior topcoat for additional moisture protection.

DIRECTIONS:

PREP: Sand with 80 grit to open up smooth wood. Do sand over 150 and seal wood. Do NOT use pre-treaters.

APPLICATION: Products react with raw wood to create color. Use sprayer, brush, or flood system. Apply one LIBERAL coat of stain, **drenching** the wood. Do **NOT** WIPE off stain after applying, allow to air dry. Second coat may be applied if desired; but darkening results vary based on stain and species combination.

DRYING: Dry time 30 (typical) -240 min. (floors). Allow for longer dry times in damp / humid climates.

FINISHES: Use with the Weatherwood Stain finish of your choice, per the direction on the can.

See website for detailed application instructions, additional images, product safety & warranty info.
