PRODUCT FACTS:

WW sells 2 wood stains: **Reclamation** and **Salvage**. WW products are reactive, stains, which react with the tannins in the wood. Color results are species contingent. WW contains NO pigments, dyes or colorants.

WW is:

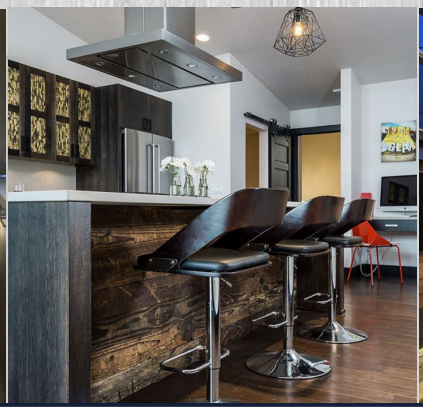
- **Interior & Exterior**
- **Water-Based**
- **Topcoat Compatible**
- **Earth-Friendly**
- **Non-Toxic**
- **VOC Free**

GREEN: Offers up to 7 LEED points. MSDS form on WW website.

USE:

INTERIOR: For furniture, flooring, cabinetry, millwork, doors, wainscoting, etc.

EXTERIOR: Use on shingles, siding, fence, decks, etc. WW oxidizes the wood and provides an all-natural UV protection. Pair with an exterior topcoat for additional moisture protection.



DIRECTIONS:

PREP: Sand with 60-80 grit to open up the wood. Products react with raw wood to create color. Do NOT use pretreaters.

APPLICATION: Use sprayer, brush, or roller. Apply one LIBERAL coat of stain, **drenching** the wood with a paint sprayer, foam roller, or brush. Do **NOT** WIPE off stain after applying. Allow WW to penetrate for 5-10 minutes. Second coat may be applied if desired; but each wood species will obtain its own darkest shade.

DRYING: Dry time 30-240 min. Drying wood can be handled without harm. Allow for longer dry times in damp / humid climates.

FINISHES: Use with WW Finishes for best color results. Compatible with most finishes, apply per directions.

See website for additional images, product safety & warranty info.
